

Assistant Portal

- Allow the assistant to grab a new task without waiting for the handler to assign it to them.
- When the user sends a message within a task there is no notification for the assistant. The same how we have notifications on the user portal. We should have the same thing for the assistant portal too.
- When the user sends a message within a task, there is no notification given to the assistant.

Handler Portal

User Portal

- There is an “Action required” status on the pending tab, if a task is on the Pending tab it is awaiting to be actioned therefore there shouldn't be any further updates.
- I have noticed every ticket within the Ongoing tab has the “action required” button, this button only needs to appear once the assistant has provided the user with 3 options.
- Can we copy the same colour coding from the assistant/handler portal for the user portal? Change the font colour of the date within the “Due Date” within the Pending and Ongoing task. I.e if it's 6 days to go it shows on the user portal as “Due Date: 6 days”
- The top right notification should be cleared once the user has clicked on each notification. So the notification should just countdown depending on how many statuses the user clicked on. Also when you click on the status it should take you to the appropriate page.
- The confirmation popup message that says ‘Task saved as draft’ doesn't disappear. Can you make it so it fades away after a couple of seconds?
- In the Draft tab, when clicking on the box to start typing the grey text on the right ‘Press enter to add new task’ disappears. Can you keep that so the user is aware?
- When I click on each tab, it reloads the whole page. It should just load everything under the tabs nothing above the tab should be loading.
- Within the Draft tab - when I click on the ‘Submit Task’ link it asks me if I stopped recurring task

- The chat box within the ongoing task is too long, currently, I have to scroll down to type on the box, can we make it shorter so it appears without scrolling down.
- The greeting when the user login should be, “Good afternoon, Manjula” not “Good Afternoon, manjula”
- Gateway > Itinerary planning > Question no 4, correct typo “ Not sure,yet” add space after comma
- Once the task is amended or created, you have a confirmation message that fades out. Could we make the message appear for about 3-4 seconds and then fade out slightly faster? It’s currently fading extremely slowly.
- If a task is edited within the Pending tab, keep it under the original date the task was raised on. Currently, if I edit a task that was created two days ago, it moves to the tasks today.
- The user shouldn’t be able to message while the ticket is still under Pending since it hasn’t been picked up. So can the messenger be greyed out.
- When amending the user’s settings, “Partner’s email address” is currently set as the required field, that shouldn’t be the case. Also, if the user then adds a partner’s email address, we should send a registration email to the partner’s email address and link his account with his or her other half.
- Once the assistant provides 3 options, on the task list instead of ‘In Progress’ it should be red ‘action required’ and once the user chooses one of the three options the status should change back to ‘In Progress’
- On the mobile version, when adding a task make the categories of tasks (the circle icons) fit within 3 rows. Like below

- When the user logs on to the mobile version, we need to have a pop-up message to be able to add the link home-screen as a shortcut. The message should read:

“Add your JuggleJoy portal to your Home Screen for quick access and better experience!”

Buttons:

Add to Home Screen: This triggers the install prompt.

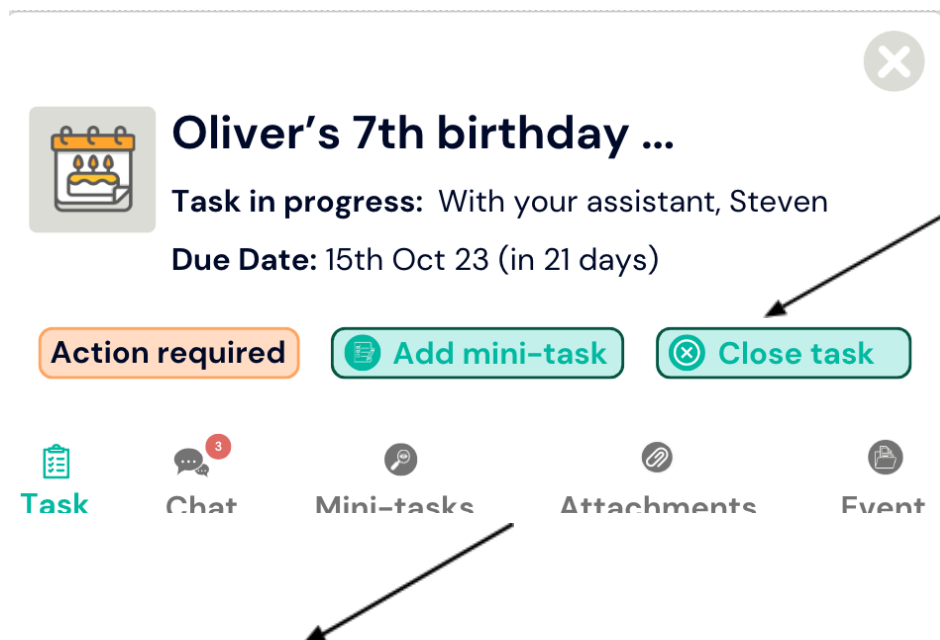

Maybe Later: Simply hide the prompt until the next time they log in.

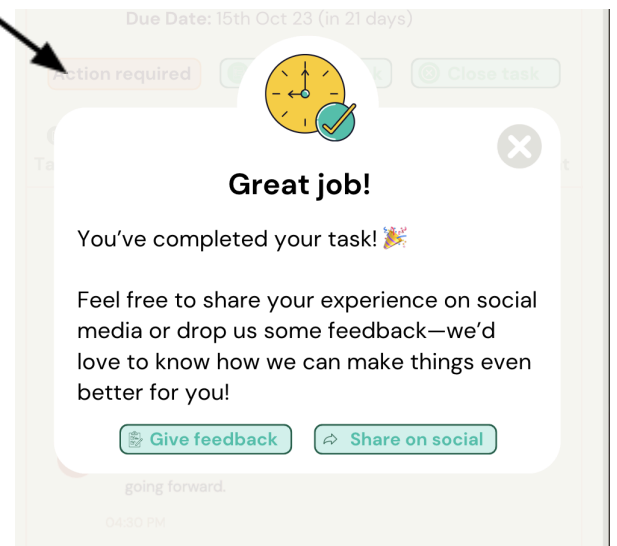

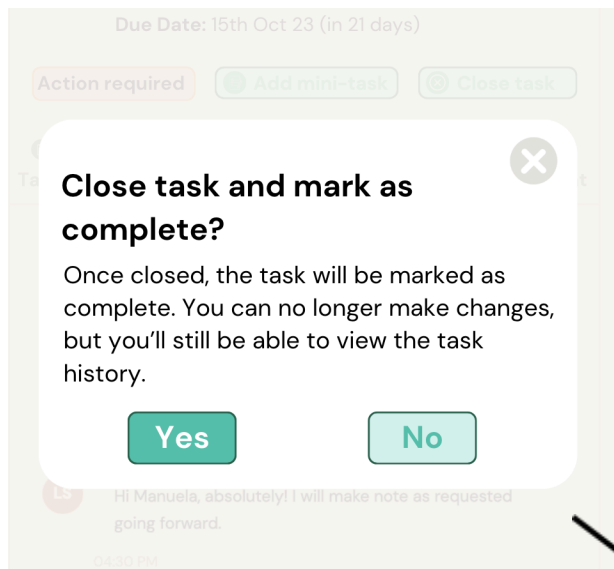

Don't Show Again: Hides the prompt and prevents it from showing again.

- Once the user picks one of the options out of the 3, it goes to the survey section automatically . However, by the user selecting the option s/he is indicating they want that option the assistant to proceed with. So there could be more back and forth after. Therefore the process is...

The assistant provides 3 options > the user picks 1 option out of 3 (no need to allow the user to add ‘User Note’) and clicks on Proceed with this option button > the assistant then receives a notification to say that the user has picked an option to proceed with (this step the assistant handles all the details: scheduling, reservations, bookings, and logistics, etc). > The assistant messages the user all the details via chat > once the user picks an option then can use the Close Task button at the top next to the Action Required and Add mini-task buttons > It then asks the user to fill out a survey > followed by sharing the task on social media

- Once the task is moved over to the Ongoing tab, add a ‘Close task’ icon, so the user can close the ticket which then brings up the survey, etc.

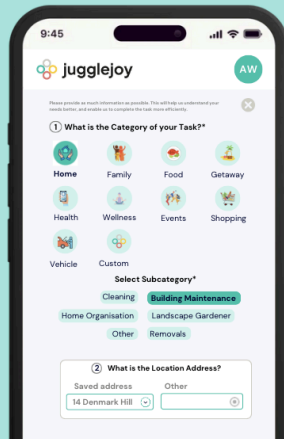

Website

- During the registration, the user should be able to put their postcode in a different format. I.e. E18 5UT or E185UT (with or without space)
- Following on from the above, as soon as they put their postcode the list of addresses should appear so they can choose their home address.
- The video on the top of the homepage is blank on the mobile version.
- Also want to change the section on the homepage that say as easy as 1-2-3 to the screenshot below....

Complete Tasks in 4 Steps

Enjoy stress-free living with just 4 simple steps. We are tailored to handle all of your mundane to-do lists and manage tasks effortlessly, so you can make the most of your day.

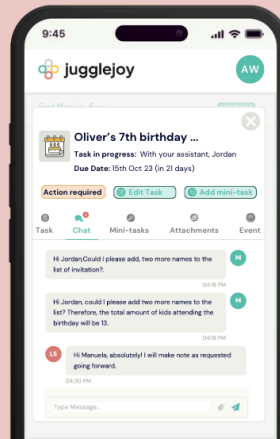

1 Create your task

Start by specifying what you need help with. You can choose from featured to-dos, find tasks by category, or create a custom to-do.

A dedicated specialist is then assigned to tackle your task, ensuring personalised and efficient service.

2 Keep in touch

Use the chat system on each task to stay in touch with your assistant. Share instructions, ask questions, and receive timely updates and feedback, ensuring everything goes smoothly.

The chat feature is always open, right at your fingertips.

[Start enjoying more family time!](#)

Admin Portal

- I should be able to change the actual and discounted price, under the price management tab.
